1,2,3-Trichloropropane (TCP)

Dangerous environmental pollutant

Propylene → epichlorohydrin (93 %) + TCP (7 %)

Biodegradation by haloalkane dehalogenase DhaA

Low activity for commercial use

| DhaA variant | Relative activity |
|--------------------|-------------------|
| WT | 1 |
| Bosma ¹ | 3.5 |
| Gray ² | 4 |

¹Bosma et al. (2002) *App. Environ. Microbiol.* 68, 3582-3587.

²Gray et al. (2001) *Adv. Synth. Catal.* 343, 607-616.

Why Export Routes?

● Main tunnel

● Slot

C176 (WT)

Y176 (Bosma, Gray)

Export of Cl^- through the Main Tunnel

1 Equilibration MD

Time: 1700 ps

Export of DCL through the Main Tunnel

2 RAMD

Time: 00 ps

Export of DCL through the Slot

2 RAMD

Time: 00 ps

Re-design of Export Routes

Main tunnel:

● C176Y

Slot:

- W141F
- I135X
- L245X
- V246X

Re-design of Export Routes

Main tunnel:

● C176Y

Slot:

- W141F
- I135X
- L245X
- V246X

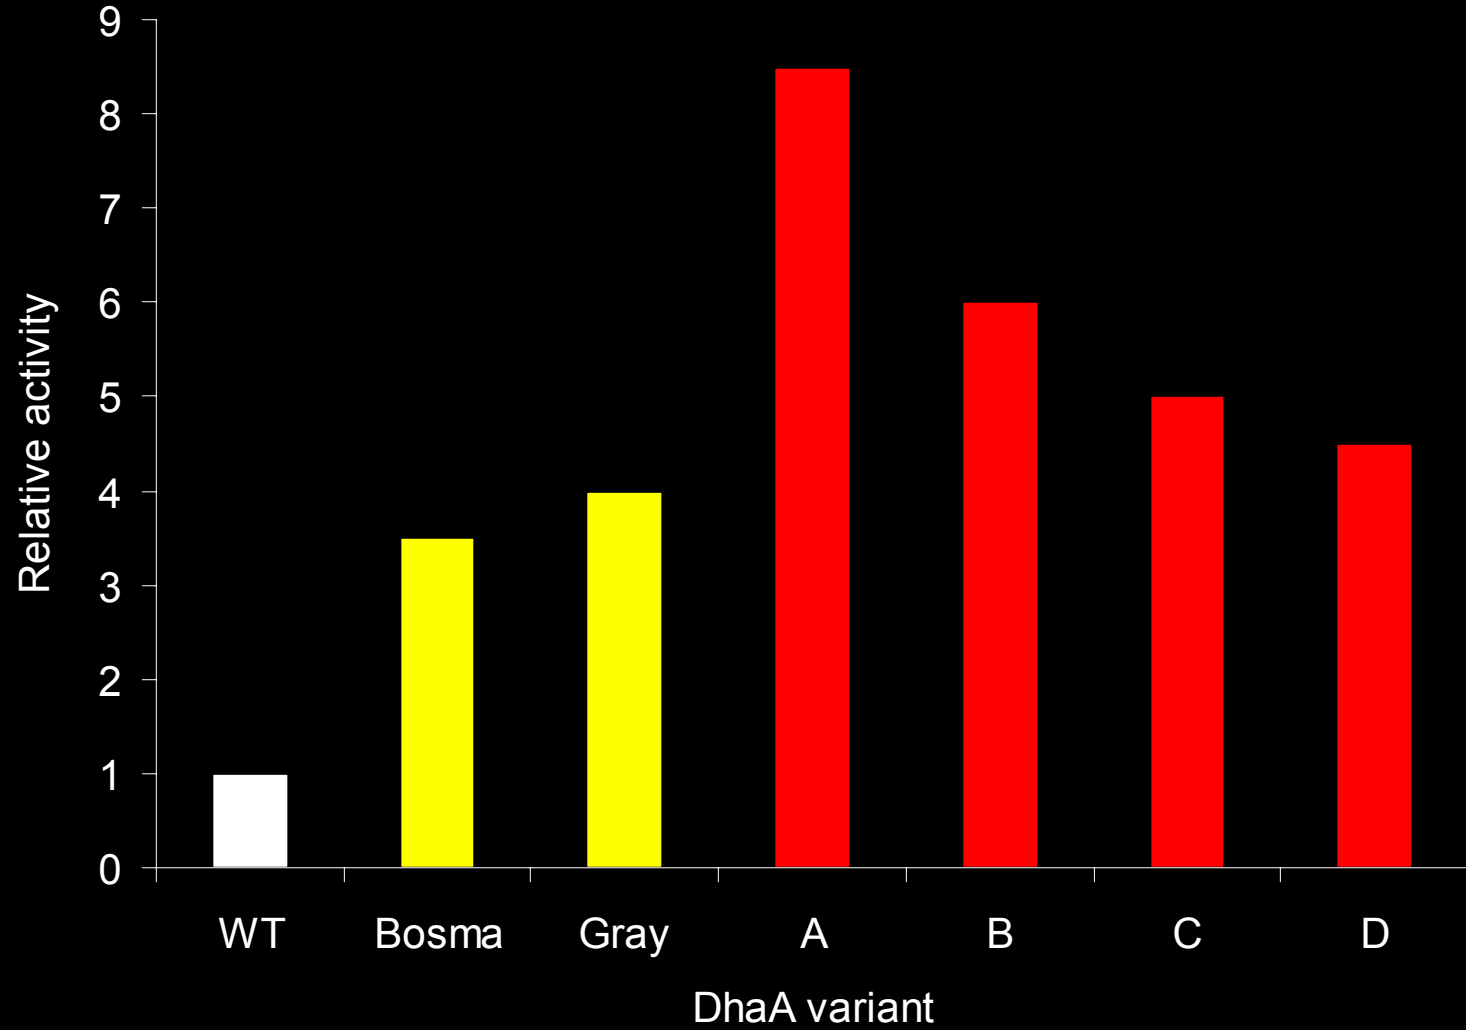

Mutagenesis

- Site-directed mutagenesis
- Directed evolution

| Mutant | C176Y | W141F | I135X | V245X | L246X |
|--------|-------|-------|-------|-------|-------|
| A | ✓ | ✓ | F | M | I |
| B | ✓ | ✓ | Y | M | I |
| C | ✓ | ✓ | F | F | I |
| D | ✓ | ✓ | L | F | I |

Mutagenesis

Conclusions

RAMD provides useful information for protein design

Order of product release is 1. Cl⁻, 2. DCL

Export route for Cl⁻ is main tunnel

Export route for DCL is main tunnel and slot

Slot residues selected for mutagenesis are I135, W141, V245 and L246

The best mutant has 2-fold higher activity than mutant of Gray *et al.*
